

An Important Announcement regarding the Re-opening of the Lake Wynonah Pool

The Maintenance team has been busy these past few months prepping our pool to be ready to open for the summer season. As COVID continues to change our world, it also changed how we work. The Maintenance team painted the pool, filled it with water and began the required chemical treatments. The Red Phase that Schuylkill County remained in also prevented our pool from opening Memorial Day weekend.

This week, our pool developed White Algae. This requires additional chemical treatment to bring the water quality to the recommended swim standard for in-ground pools. As soon as the alga was discovered, the necessary chemical for treatment was ordered. The treatment should take 3-4 days to resolve.

Unfortunately, the pool is not up to required water quality standards to open this weekend. We will continue to monitor and work to open the pool as soon as possible. When the pool opens, we will follow the Department of Health's capacity guidance. At this time, pool use is restricted to Members and Residents only. Guest are not permitted.

Keep watching for important announcements via email for continued updates.
